99. Slide no. 11 "Diversity in business model / business model innovation" is possible when firms approach or reach their markets in different ways and design or devise different ways to generate money.
100. Slide no. 12 …How "business model innovation" is possible? It is possible when superior or unique value is created through "value chain" which is actually the "string of activities" that moves the products from the raw material stage through manufacturing, distribution and ultimately to the end user. In order to follow the concept of "business model innovation" organizations bring changes or uniqueness or innovation in the above said "string of activities" that helps to reduce steps from the string of activities that reduces operational cost and also reduce delivery time of the product and also helps an organization to reach the customer or market in a very different way. These all things are the sources of "differentiation" that helps an organization to sell the product at a premium price easily.
101. Company's string of activities OR "value chain" ……on slide no. 13.
102. Slide no. 14 …."Business model innovation" is possible when an organization "add value" in the existing value chain means "business processes" that are followed by every market player of the industry. When an organization bring some changes in a unique way / superior way into the "value chain" or existing strings of activities then this change in value chain will help an organization to add superior value for its customers (either through products or services).
103. Slide no. 16…potential fatal flaws of a business model (two).
104. Four components of business model (slide no. 17 and 18)
